

# Function (C++)

```
1  #include <iostream>
2  using namespace std;
3  float pay(float sale){
4      int bonus = 0;
5      if(sale >= 1500){
6          bonus = 125;
7      }
8      float wage = (sale * 0.15) + bonus;
9      return wage;
10 }
11 int main(){
12     float sale, wage;
13     cout << "Enter this day's sale amount. ";
14     cin >> sale;
15     wage = pay(sale);
16     cout << "Wage of the day: " << wage;
17 }
```

Enter this day's sale amount. 1400

Wage of the day: 210

Enter this day's sale amount. 1500

Wage of the day: 350
